

Dance

Encourage and explore the participation, analysis, appreciation, and history of Dance. Students can create diagrams to compare different styles of dance, from clogging to stomping to ballet. Teachers can collaboratively plan interdisciplinary lessons, such as choreographing, graphing, and performing a figure for a square dance, in the Math + Arts collection. Groups of students can explore cultures across the globe from the perspective of dance and present their findings to their classmates. The history of dance, dance as a profession, and technology in dance are among the additional topics explored in Dance.

Topics and resources in the following areas:

- Appreciation and Analysis of Dance Works
- Dance Creation, Participation, and Performance
- Dance Forms
- Society and History of Dance
- The Dance Profession
- Dance and Other Domains
