

Geography

Students will go beyond identifying the physical features of Earth to explore how humans interact with the world around them using resources in Geography. Students can study a comic book-like document to analyze how California rations water during a drought, or they can research the many ways climate change impacts humans across the globe. The economic impact of a changing environment is also analyzed in Yukon Kings and a series of resources on Mongolian Nomads. The tools used by geographers, from ancient maps to modern geographic information systems (GIS), vocabulary (what is a border?), and methods of geography are also explored.

Topics and resources in the following areas:

- Geographical Language
- Human Ecology
- Tools and Methods
